

## Physical Review Volume 27 (Paperback)

Filesize: 7.48 MB

### ***Reviews***

*The publication is easy in read through better to recognize. It usually will not cost too much. You wont feel monotony at whenever you want of the time (that's what catalogs are for concerning when you question me).*

*(Rebecca Bechtelar)*

## PHYSICAL REVIEW VOLUME 27 (PAPERBACK)

To download **Physical Review Volume 27 (Paperback)** PDF, please refer to the link listed below and download the ebook or get access to other information that are in conjunction with PHYSICAL REVIEW VOLUME 27 (PAPERBACK) ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 edition. Excerpt: .these tables it may be seen that the photo-electric activity of all the metals is increased by use as anode in a glow current in hydrogen while none of them, with the exception of silver in nitrogen, exhibits this property in any of the other gases. This exception makes it probable that there is an absorption of nitrogen by silver or the formation of a chemical compound sufficiently unstable to allow the nitrogen to play with the silver a part similar to that universally played with all metals by hydrogen. To test this supposition carbon, which is known to absorb nitrogen readily, was also tried and found to show a slight increase after use as anode in this gas--which results are given in the foregoing tables. 7. Change with Time of Exposure.--Tests were also made of the rate of increase of the photo-electric activity of different metals by simply standing at a given potential in hydrogen. Similar tests were also made to determine the effect of the time of exposure to the conducting gas. The results are embodied in the following tables. Preliminary to each observation the metal was brought to the same initial condition by use as cathode. The photo-electric effect was then tested as in the foregoing experiments with the metal at a negative potential of 40 volts. This shows a marked time effect, approximating a maximum activity in 10 to 15 minutes for all potentials of the metal. No variation with...
